Security Guide

Starlight Technology | Fictional demo document

1. Account protection

Use unique passwords and enable multi-factor authentication. Never share API keys in chat messages or commit them to a public code repository.

2. Incident reporting

If you suspect a security incident, contact IT support immediately and preserve relevant logs. Do not delete evidence or continue using a compromised account.

3. Document handling

Remove personal information and secrets before importing documents into a demo knowledge base. Only approved excerpts may be sent to an external language model API.
